

## Aline Biosciences PCR Clean DX:

**A highly affordable and top quality sequencing clean-up reagent**

**Are you currently spending an excessive amount on sequencing reagents?**

**PCR Clean DX** utilizes Aline Bioscience's proprietary paramagnetic bead technology for quick high-throughput purification of DNA fragments.

Aline's PCR Clean DX is a very affordable direct replacement for the market's commonly used very costly PCR clean-up solutions. This is because it is a first-class product with the same functionality and it gives the same or better results than the market leaders.

No protocol changes are necessary.

Cambio distribute Aline Biosciences products in the UK and Ireland and because we are so impressed with feedback from end-users so far we are offering free samples of trial sizes of Aline PCR Clean DX for the month of November 2019 so researchers can test it for themselves.

All we need is a little feedback on how you get on ...
