

Anti-Human DOPAMINE D2-3 RECEPTOR
(Polyclonal Rabbit)

Cat. No.:	CA-1075a
Titre:	400:1 minimum by ELISA
Antigen:	Carboxy terminus peptide
Sensitivity:	This antibody detects 50ng dopamine receptor peptide by ELISA
Isotype:	Mainly IgG
Specificity:	No neutralisation has been attempted.
Cross-reactions:	Not tested, but from the sequence of the peptide chosen to raise this antiserum it is likely to be specific for both D2 and D3 in human and possibly murine species.
Presentation:	Non-sterile serum.
Storage:	At -20 °C stable for 6-12 months. In liquid form repeated freeze-thaw should be avoided, and prolonged storage at 4 °C should be with azide.
