

**Anti Human CYSTIC FIBROSIS PROTEIN**  
**(Polyclonal Rabbit)**

Cat. No.:	CA-1119
Titre:	To be determined in end user's own assay system
Antigen:	The peptide in the human CF associated sequence CEEVQDTRL (carboxy terminus)
Sensitivity:	Failed to detect Human CF protein at 1:100 by Western blotting. Probably worth testing by immunodiffusion.
Isotype:	Mainly IgG
Cross-reactions:	Not tested, but from the sequence of the peptide chosen to raise this antiserum it is likely to be specific for human cystic fibrosis protein and possibly closely related species.
Presentation:	Non-sterile serum
Storage:	Store at -20 °C stable for 6-12 months. In liquid form repeated freeze-thaw should be avoided, and prolonged storage at 4 °C should be with azide.

**FOR RESEARCH PURPOSES ONLY**
